

Mental health during the second wave of the COVID-19 pandemic in Canada

The COVID-19 pandemic led to major changes in the day-to-day lives of Canadians, impacting both their physical and mental health.

Positive Mental Health

Positive mental health is the capacity of each and all of us to feel, think, and act in ways that enhance our ability to enjoy life and deal with the challenges we face. It includes measurable outcomes such as feeling satisfied with life, feeling a strong sense of community belonging, and rating one's mental health as excellent or very good.¹

Compared to before the pandemic in 2019, fewer adults in Canada reported experiencing high positive mental health during the pandemic in Fall 2020.²

Excellent or very good self-rated mental health

60% in Fall 2020 vs. 67% in 2019

Very strong or somewhat strong sense of belonging to local community

64% in Fall 2020 vs. 68% in 2019

Average satisfaction with life, rated from 0 (very dissatisfied) to 10 (very satisfied)

7.2 in Fall 2020 vs. 8.1 in 2019

Inequalities in mental health

The COVID-19 pandemic has had a disproportionate impact on the mental health of some population groups. The following groups in Fall 2020 were more likely to report that their mental health was somewhat worse or much worse compared to before the COVID-19 pandemic:

Females (vs. males)

Individuals aged 18–64 years (vs. 65+)

Those living in urban areas (vs. rural areas)

People absent from work because of a business closure/layoff or personal circumstances related to COVID-19 (vs. not)

The Public Health Agency of Canada will continue to monitor positive mental health and other mental health outcomes in Canada into 2021 and beyond.

More information about the data

The Public Health Agency of Canada funded the 2020 Survey on COVID-19 and Mental Health to better understand the self-reported mental health of Canadians during the pandemic.³ Responses from adults living in Canada were collected by Statistics Canada from September to December 2020. Additional findings from the 2020 Survey on COVID-19 and Mental Health are available in the **November 2021 special issue** of the Health Promotion and Chronic Disease Prevention Journal.

Mental health resources are available

If you, or someone you know, is in crisis or needs mental health and substance use support, visit Wellness Together Canada for a wide range of resources and supports: <https://wellnesstogether.ca/en-CA>.
